Tanegashima Onsen - "Akaogi no Yu" is classified the hot spring type "Sodium - Bicarbonate Hot Spring", which characteristically removes old dead cells to make your skin smooth. Bicarbonate springs are said to be among the three major hot spring types that create beautiful people, along with sulfate springs and sulfur springs. The appellation of "medical treatment springs" given to these hot springs means that these types of water are not simply hot springs but you can also expect medical effects from the water. Please enjoy Tanegashima's first onsen with the water taken directly from the hot spring source, with natural carbonic acid that works for your body.

Hot Spring Type: Sodium - Bicarbonate Hot Spring

Hot Spring Temperature: Approx. 40 ° C (104 ° F)

Volume of Discharge: 360 L/min. (well)

pH value: 8.4 - 8.52

Medical Treatment Springs: 1,272 mg/kg
Total amount of dissolved substances, excl. gas components

Well Depth: 1,500 m

Indications

(Hot Spring Analysis Done by Kagoshima Environmental Research and Service)

- 1. General Indications of Medical Treatment Springs (For Bathing)**
